Lahore, Pakistan

PROFESSIONAL SUMMARY

Software Engineer specializing in **PHP, Laravel, and backend application development**, with professional experience building SaaS platforms, business management systems, REST APIs, subscription and payment workflows, and third-party integrations. Experienced in designing backend architecture, MySQL databases, authentication and authorization systems, role-based permissions, webhooks, business logic, and API-driven applications. Contributed to production systems including multi-company SaaS platforms, remote-work tracking software, a US business-formation partner platform, and POS/financial management software. Strong hands-on experience taking backend features from requirements and database design through implementation, testing, integration, and production support.

Skills

Backend: PHP • Laravel • CodeIgniter • REST APIs • OOP • MVC • Authentication • Authorization • Webhooks

Database: MySQL • Database Design • Relationships • Indexing • Transactions • Query Optimization

Frontend: JavaScript • Next.js • Blade • HTML/CSS • Bootstrap

Payments : stripe Integrations & Communication : Firebase • Zoom • Dolby • Twilio • AWS S3 • Backblaze • Mux

Testing & Tools: PHPUnit • Postman • PHPStan • Laravel Pint

Experience

Appicon Soft

Lahore, Pakistan

Software Engineer

11/2023 - Present

- Developed and maintained backend systems using PHP, Laravel, CodeIgniter, and MySQL across multiple production SaaS platforms and client projects.
- Architected backend systems for multi-company SaaS platforms, remote-work tracking software, a US business-formation partner platform, and a POS/financial management system.
- Built subscription and payment workflows, REST APIs, authentication/authorization, and third-party integrations (Stripe, Firebase, Twilio, AWS S3).
- Collaborated with frontend developers and QA teams across feature development, testing, debugging, code reviews, and production support.

Appicon Soft

Software Engineering Intern

08/2023 - 11/2023

- Started professional development with PHP and CodeIgniter, working with MVC, OOP, databases, APIs, and backend application development.
- Progressed into a Software Engineer role through hands-on development across company products and client projects.

Projects

ROI - SaaS Business Management Platform

Professional Project • Laravel / CodeIgniter /MySQL /Stripe/Firebase

Multi-company SaaS platform for managing business operations, customers, suppliers, CRM workflows, appointments, communication, subscriptions, and invoicing.

- Developed backend architecture for company-specific roles, permissions, menus, CRM pipelines, deals, offers, appointments, invoices, and business workflows.
- Implemented Stripe subscription lifecycle including trials, failed payments, cancellations, plan changes, webhooks, company access control, and upgrade proration.
- Built Firebase-based 1-to-1/group chat and integrated appointment-based video communication with scheduling, recordings, transcripts, notifications, and attachments.

TrackPilot AI - Remote Work & Time Tracking SaaS

Professional Project · Laravel /MySQL/Next.js/Stripe/Firebase

Production SaaS platform for remote-work tracking, projects, tasks, screenshots, activity monitoring, timesheets, approvals, reporting, and invoicing.

- Owned backend development covering organizations, freelancers, projects, tasks, roles, permissions, time tracking, screenshots, activity data, timesheets, and reporting.
- Built REST APIs for Next.js and backend services supporting desktop-tracker data, screenshot storage, activity metrics, subscriptions, administration, support, plans, and coupons.

Bizee - US Business Formation Partner Platform

Professional Project · Laravel / PHP / MySQL / REST APIs

Partner platform connecting external business-formation partners with Bizee services.

- Developed Laravel APIs and partner dashboard functionality using Bearer-token authentication and integration with Bizee/Atomic internal systems.
- Worked on partner workflows, webhook communication with white-label companies, business-formation testing, and API integration.

ZaadDOCS - POS & Financial Management System

Professional Project · Laravel / PHP / MySQL / Blade

Business management and POS platform covering customers, suppliers, agents, products, sales, purchases, payments, ledgers, invoices, expenses, and financial reporting.

- Designed the database and developed core backend and financial business logic.
- Built Blade-based POS interfaces and daily/monthly financial reporting functionality.

AI-Powered Live Chat

Independent Project · PHP / Laravel · AI Integration

Built a website live-chat solution with AI integration for automated customer interaction and lead handling.

CRM & Email Campaign Platform

Independent Project · PHP / Laravel

Developed backend functionality for customer management, CRM workflows, and email campaign operations.

Packaging Business Platform

Independent Project · PHP / Laravel

Built a Laravel-based CRM for a custom B2B packaging business, handling customer management, quote requests, and order workflows for a US-facing e-commerce operation.
